primotechmax™ 94

Features, dimensions & Capacities

The Max94 setter tray and basket have been developed to fulfil every single criteria required by today's poultry professionals. Two tray types are available, with or without stacking pillars, the latter of which can be stacked 18 high to accommodate 6,768 eggs per trolley, making our PT24 capacity 162,432 eggs!

Ergonomics: The tray is extremely easy to handle with the weight of only 94 eggs, and due to it's strength and resistance is designed for longevity.

Automation: The tray is bi-symmetrical so orientation is no issue at transfer or when loading trolleys.

Hygiene: Designed for ease of cleaning and sanitisation.

Egg Security: The cradle is designed to hold the egg for maximum performance.

Cost per Egg: The tray is perfect for all sizes of operations, and with the reduced cost per egg is more affordable than other tray systems.

Hatchability & Chick Quality: This tray has been in continious operation at a Eoropean hatchery for several years. The hatchability and quality scores (available on request) have been excellent for flocks of all ages.

Max94 Basket: Compliments the 94 tray perfectly and is ideal for automated processes with two trays per basket. A tried and tested design that is easy to handle, hard wearing and chick friendly.

PrimoTech Max94 Capacities

SETTER	16 STACK	17 STACK	18 STACK
PT2	12,032	12,784	13,536
PT4	24,064	25,568	27,072
