TRANSFORMING CHICK QUALITY IN LATIN AMERICA

When Avícola Yugoslavia, a leading poultry producer in northern Peru, sought to raise its hatchery performance, it turned to EmTech's PTH192-165 PrimoTech Hatchers; a system renowned for its world-leading temperature control. The results were immediate!

97% BREAKTHROUGH HATCH

In their first cycle using the PrimoTech system, we were delighted to hear that Hatchery Manager Fiorela Sanchez reported a benchmark achievement in hatch performance that exceeded expectations and reinforced EmTech's global reputation for excellence in incubation technology.

"We are excited to share the results of the first birth from our EmTech hatchers, which gave us a rate of 97% hatch from fertile"

EXCEPTIONAL CHICK QUALITY

Beyond numbers, Fiorela and her team were particularly impressed by the vitality and uniformity of the chicks, and highlighted visible improvements in their condition . . . an essential factor for long-term flock performance.

"We've also observed calmer and fluffier chicks. We are extremely pleased with the quality and hope it continues this way"

This feedback affirms the PrimoTech's ability to provide a stable, stress-free hatching environment, producing robust and uniform chicks ready for optimal post-hatch performance.

A PARTNERSHIP FOR THE FUTURE

At EmTech Hatchery Systems, we are proud to support Avícola Yugoslavia's mission to deliver high-quality poultry across Peru. This successful result underscores our commitment to providing cutting-edge hatchery solutions that adapt to the needs of diverse markets worldwide.

We're happy to continue supporting Avícola Yugoslavia and our hatchery partners globally in delivering healthy, high-performing chicks with every cycle.
