

Smaller Systems for Game-birds and Poultry

Features

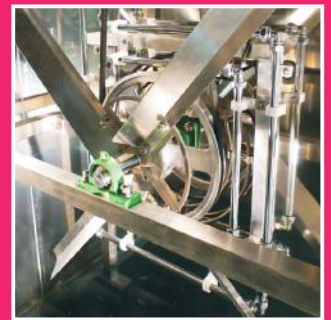

High quality, fully sealed, cabinet. Built using the same principles as the larger capacity EmTech incubation systems

Food safe steel panel exterior with stainless steel 304 interior as standard, 316 stainless steel can also be supplied as an upgrade

Fully built, commissioned and tested ready to use – just plug in and go!

Stainless steel paddle frame and many other fixtures for bio-security and easy cleaning

The MicroTech range of smaller incubation systems has been developed for laboratories, research facilities, breeders, game-bird and specialist poultry producers.

It is a compact trolley/dolly based system based on the standard 132 egg tray and offered in two cabinet sizes of 9 and 18 trays/baskets with capacities for chicken of 1,188 and 2,376 eggs. It is also offered as a combination setter/hatcher so that the machine can be multi-staged for continuous setting and hatching operation.

The MicroTech can be used to incubate most commercial bird species from chicken, duck, turkey, goose, to quail, partridge and pheasant.

EcoGem control is very reliable and easy to operate and maintain.

Optional upgrade available for connection to the Sentinel® monitoring system

Door mounted Inspection window gives good visibility and peace of mind

UltraMist® humidification is a highly efficient and reliable, air and water, atomization spray humidity system. No more blocked nozzles and no humidity spray pan.

Single phase 230V 50/60Hz for connection to a standard 15A electrical supply

MicroTech MT18
